How to calculate month on month performance Portfolio with monthly or irregular investments

Opening value = Previous month closing + Current month investment

Closing value = total units * last market value

% = Current value/opening value - 1

But for INDEX Current value/Previous month closing - 1

Opening Value INDEX closing value

Continued....

Now if a months returns for portfolio is 2% as per previous formula then that months ending value is
Portfolio value = $1 * (1 + 2\%)$

Asset Allocation should capture broad
allocation
Equity funds
Debt
Gold,
Hybrid
